

AWS Security Case Study

Leveraging AWS to ensure customer success

IR Exchange

irexchange is a disruptive technology and next-generation business that is changing the economics of retail distribution and delivering fairness, transparency and efficiency to the retail sector. irexchange is not a wholesaler, retailer or supplier.

irexchange empowers retailers and suppliers to better compete, improve market access and increase revenue by harnessing the disruptive capabilities of new technology.

THE CHALLENGE

As a startup born in the cloud, irexchange has been utilising AWS since day 1. With a growing customer base and increasing demand for new products, services and promotions, irexchange recognised the need for more efficient, scalable & automated infrastructure management and deployment processes. The existing open source & in-house security & compliance processes were time consuming and didn't provide the level of continuous improvement or real-time security necessary.

THE SOLUTION

irexchange has partnered with Cloud Conformity to manage the complex task of maintaining real-time visibility of their infrastructure and ensuring compliance against the Well-Architected Framework and industry best practices. Cloud Conformity is also used as an educational tool, enabling staff to quickly up-skill on best practice implementation, with step-by-step resolution guides enabling staff at all levels to rectify security vulnerabilities, reliability risks, performance efficiencies & cost optimisations.

THE BENEFITS

End to end security

Preventative, detective & corrective controls ensure end to end security of irexchange's infrastructure.

Real-time security

Cloud Conformity's real-time detection provides visibility and remediation of vulnerabilities as they occur.

Continuous compliance

Continuous compliance against the Well-architected Framework, PCI & GPR.

ABOUT CLOUD CONFORMITY AND AWS

Cloud Conformity is a market leading security & real-time threat detection platform. The preventive, detective and corrective security controls make it a true end-to-end cloud security solution and governance platform.

As an AWS customer, you will have access to the tools and services you need to meet your organization's unique security and compliance needs.
